

Psychology MINOR Q3 Grade Recovery Opportunity #2
Lobes of the Brain...on a bike!

Briefly describe how someone might use two of the lobes of the cortex listed below while riding a bicycle. For each of the lobes you choose, include a general description of the function it performs and an example of how that function relates to riding a bicycle.

- a. Occipital lobe
- b. Temporal lobe
- c. Frontal lobe
- d. Parietal lobe

Look back at your notes or do a quick Google search if you have forgotten the responsibilities of these lobes of the brain!

****You must type in complete sentences. No minimum length required as long as you have properly answered the question.****
